

THE WORLD'S HIGHEST CAPACITY PNEUMATIC TORQUE WRENCH

PNEUTORQUE® PT15 LAUNCH

McCann Equipment Ltd. and Norbar are proud to announce the world's highest torque capacity pneumatic torque wrench, the 200,000 lbf.ft (300,000 N.m) Pneutorque PT15.

The PT15 was originally designed for maintenance of hydraulic cylinders when releasing and retightening the gland nut on the piston rod.

Norbar's latest and biggest addition to the PT range will release the gland nut on the largest, next generation of off-road rigid dump trucks.

Other applications are certain to be out there, and we are keen to hear new ideas.

The output drive is a 6 inch female serration. Male output adaptors will be designed for each application. Similarly, no standard reaction plate is offered with the PT15 because each application is expected to be unique.

Part No.	Range N.m	Free Speed	Overall Height	Maximum Diameter	Weight
16054.MTS	85,000 to 300,000	0.4 rpm	930 mm	520mm	380 kg

*Overall height and weight excludes reaction plate and male output drive.
